

NAME

xml2resp – convert a file from station.xml to RESP format.

SYNOPSIS

xml2resp [-v] [-o output] [input]

DESCRIPTION

Xml2resp will read an input file in station.xml format and write the equivalent response data in RESP format. It is intended to produce identical output to the IRIS-WS package, and is used internally by *evalresp* when the **-x** option is given.

COMMAND-LINE PARAMETERS

- o file** output file (RESP format; stdout used if omitted)
- v** show error messages (to stderr)
- v -v** show warning messages
- v -v -v** show information messages
- v -v -v -v** show debug messages

If no input file is given, stdin is read.

SEE ALSO
